

Amendments to the Claims

1. (currently amended) A method comprising:

- (a) operating a cash dispenser in an automated banking machine during a cash dispensing transaction to move cash toward and present the cash at a cash receiving location accessible by a machine user;
- (b) responsive to the cash dispenser moving the cash toward the cash receiving location in step (a), operating a multicolor light emitting device at a user interface of the machine adjacent to the cash receiving location to output a first color; and
- (c) responsive to the cash dispenser presenting the cash at the cash receiving location in step (a), operating the multicolor light emitting device to output a second color, wherein the first color differs from the second color
- (a) operating a first transaction function device of an automated banking machine in conducting a transaction, wherein the machine includes a cash dispenser, and wherein such operation causes at least one first condition of the first transaction function device to change;

- (b) ~~changing a color output by a first multicolor light emitting device on a user interface of the machine adjacent to a first location where a user interacts with the first transaction function device, between at least two output colors responsive to the change in the at least one first condition.~~

2-3. (canceled)

4. (currently amended) The method according to claim 1 and wherein ~~(c) further includes the first color comprises yellow and the second color comprises green, wherein (b) includes outputting yellow, and wherein (c) includes outputting green~~ varying duration of the output of the at least one color responsive to the change in the at least one first condition.

5. (currently amended) The method according to claim 1 wherein ~~in (b) the first multicolor light emitting device is operative to output changes between~~ at least three output different colors, wherein (b) includes outputting one of the three colors, and wherein (c) includes outputting another of the three colors responsive to the change in the at least one first condition.

6. (original) The method according to claim 5 wherein the at least three output colors include red, yellow and green.

7. (currently amended) The method according to claim 1 wherein the first multicolor light emitting device comprises an array of light emitting diodes (LEDs) ~~LEDs~~, and wherein (b) and (c) include operating comprises changing the LEDs in providing color output.

8. (previously presented) A method comprising:

- (a) operating a first transaction function device of an automated banking machine in conducting a transaction, wherein the machine includes a cash dispenser, and wherein such operation causes at least one first condition of the first transaction function device to change;
 - (b) changing a color output by a first multicolor light emitting device at a user interface of the machine adjacent to a first location where a user interacts with the first transaction function device, between at least two output colors responsive to the change in the at least one first condition,
- wherein the first multicolor light emitting device comprises an array of LEDs,
- wherein (b) includes changing the LEDs providing color output,
- wherein the array comprises a first line comprising a plurality of LEDs having only a first output color, and wherein (b) further includes illuminating the LEDs in

the first line.

9. (original) The method according to claim 8 wherein the array comprises a second line, wherein the second line comprises a plurality of LEDs having only a second output color, and wherein (b) comprises illuminating the LEDs in the second line.

10. (original) The method according to claim 9 wherein the first line and the second line each extend generally vertically, and wherein in (b) the LEDs in the first line are illuminated during a first time period, and the LEDs in the second line are eliminated during a time period other than the first time period.

11. (currently amended) The method according to claim 7 wherein the array of LEDs is supported on a flexible web, and prior to (a) further comprising:

(d) (c) attaching the flexible web adjacent to the cash receiving location in
supporting connection with the first transaction function device.

12. (currently amended) The method according to claim 11 wherein the flexible web has an adhesive layer in supporting connection therewith, and wherein (d) (c) includes attaching the flexible web ~~in supporting connection with the first transaction function device through action of~~
via the adhesive layer.

13. (previously presented) A method comprising:

(a) operating a first transaction function device of an automated banking machine in conducting a transaction, wherein the machine includes a cash dispenser, and wherein such operation causes at least one first condition of the first transaction function device to change;

(b) changing a color output by a first multicolor light emitting device at a user interface of the machine adjacent to a first location where a user interacts with the first transaction function device, between at least two output colors responsive to the change in the at least one first condition,

wherein the first multicolor light emitting device comprises an array of LEDs,
wherein (b) includes changing the LEDs providing color output;

wherein the first transaction function device is movably mounted relative to the machine,
and wherein the user interface includes an opening adjacent the first location, and
wherein the array is in supporting connection with the first transaction function device,
and prior to (a) further comprising:

(c) moving the first transaction function device relative to the machine so that the array is viewable through the opening.

14. (previously presented) A method comprising:

- (a) operating a first transaction function device of an automated banking machine in conducting a transaction, wherein the machine includes a cash dispenser, and wherein such operation causes at least one first condition of the first transaction function device to change;
- (b) changing a color output by a first multicolor light emitting device at a user interface of the machine adjacent to a first location where a user interacts with the first transaction function device, between at least two output colors responsive to the change in the at least one first condition, wherein the user interface includes a first fascia color, and wherein at least one of the at least two output colors corresponds to the first fascia color.

15-16. (canceled)

17. (currently amended) The At least one article including computer readable media operative to cause at least one computer in an automated banking machine to carry out the method according to claim 1 wherein in (b) a color output is a combination of at least two colors output by the first multicolor light emitting device.

18-20. (canceled)

21. (currently amended) A method comprising:

- (a) operating a card reader of an automated banking machine to read a user card, wherein the machine includes a cash dispenser;
 - (b) operating a multicolor light emitting device to output a first color prior to the card being positioned to enable reading thereof by the card reader in step (a), wherein the multicolor light emitting device is at a user interface of the machine adjacent to the card reader; and
 - (c) subsequent to step (b), operating the multicolor light emitting device to output a second color subsequent to the card being positioned to enable reading thereof by the card reader, wherein the first color differs from the second color
- (a) operating an automated banking machine including a cash dispenser to perform at least one transaction;
 - (b) during (a) changing color output by a plurality of multicolor light emitting devices on a user interface of the machine.

22. (currently amended) The method according to claim 21 wherein the first color comprises green and the second color comprises yellow, wherein (b) includes outputting green, and wherein (c) includes outputting yellow and further comprising:

~~during (a) changing the duration of color output by at least one of the plurality of light emitting devices.~~

23. (currently amended) The method according to claim 21 wherein the multicolor light emitting device comprises an array of light emitting diodes (LEDs), and wherein (b) and (c) include operating the LEDs in providing color output wherein in (a) the colors are changed responsive to user interaction with at least one transaction function device of the machine.

24. (currently amended) The method according to claim 21 ~~23~~ wherein the multicolor light emitting device is operative to output at least three different colors, wherein (b) includes outputting one of the three colors, and wherein (c) includes outputting another of the three colors in (b) at least one color output is a combination of at least two colors output by one multicolor light emitting device.

25. (currently amended) The method according to claim 24 wherein the at least three output colors include red, yellow and green in (b) at least one color output is a combination of at least three colors output by one multicolor light emitting device.

26. (canceled)

27. (currently amended) ~~An article bearing instructions executable by a controller in an automated banking machine and operative to cause the banking machine to carry out the method~~

steps recited in At least one article including computer readable media operative to cause at least one computer in an automated banking machine to carry out the method according to claim 21.
